

PROJECT PROPOSAL

❖ **Title:** Pharmaplus

❖ **Team:** # 18

❖ **Members:**

- Sreekanth Bhamidipati
- Akhil Beerelli
- Abhilash Parimi
- Avinash Sankarasetty

❖ **Project Goal & Objectives:**

- To develop an android app which gives the list & details of medicines for a particular disease or a health problem and also shows the medical stores nearby.
- Also scans the name of the medicine and gives details about it.
- **Motivation :** To make the user gain knowledge about the medicine he uses.
- **Significance:** The app gives both the information about the medicine and also the stores nearby.
- **System Features:**
 - Location services
 - Scanner
 - Android Software

❖ **Backup Project:**

Wallet (Card storage):

- Wallet is an android application used to store the details of the payment cards that a user owns.
- People can store all credit, debit and any other kind of card details in a secured way.

- Also app is basically useful to store the details of all confidential documents and other important files.
- All the information is stored in the app with specific locking facilities.
- People can set any kind of lock like pattern, pin, confirmation codes etc.

❖ **Bibliography:**

- Referred to online websites.
- Online searches mostly used Google search engine.
